

BETTER CLOSE-UP IMMUNE HEALTH MEANS HIGHER QUALITY COLOSTRUM AND HEALTHIER CALVES

Prequel with omega-6s helps improve immune response, reduces ketosis and metritis, and improves 1st service conception. The following field studies aimed to:

- Observe improvements in colostrum quality in cows fed Prequel 21 days prior to calving
- Observe improvements in total proteins in calves from dams fed Prequel vs. their typical diet without Prequel

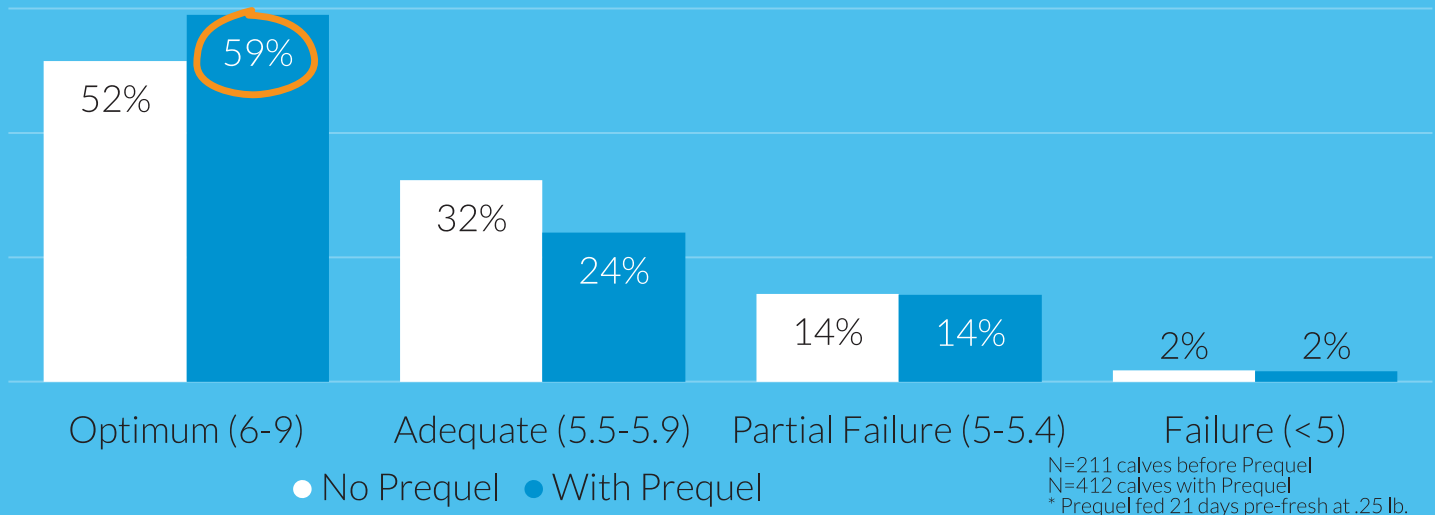

These studies show the important role that omega-6s play as **powerful immune regulators, improving transition health and reproduction** – and creating a positive impact on the colostrum quality and health of the next generation.

HIGHER IGG SCORES ON COLOSTRUM From Cows Fed Prequel in the Pre-Fresh Pen

N=471 colostrum samples before Prequel
N=967 colostrum samples with Prequel
Iowa Dairy Field Study 2015
* Prequel fed 21 days pre-fresh at .25 lb.

HIGHER TOTAL PROTEIN IN BLOOD OF CALVES
When Dam Fed Prequel in the Pre-Fresh Pen

HIGHER TOTAL PROTEIN IN BLOOD OF CALVES
When Dam Fed Prequel in the Pre-Fresh Pen
